## 1 Very Important stuff

Here is my text, including the  $\LaTeX$  symbol.

### 1.1 Important stuff

More text here.

#### 1.1.1 Less Important stuff

And even more text.

**Trivial stuff** Note that the text starts on the same line as the paragraph heading.

**Mind-numbingly inconsequential stuff** Even if you skip lines.

Just skipping a line starts a new paragraph.

You can avoid an indent by using the `\noindent` command.

## Very Important stuff with no number

Here is my text, including the  $\LaTeX$  symbol.

---

\*Physics Lab Supervisor

## **Important stuff with no number**

Note neither the indent nor the blank line affects the output.

## **Less Important stuff with no number**

The text can even begin on the same line.

**Why bother?** Note the indenting in the source file doesn't show up in the output, so it's for your benefit only.

**Mind-numbingly inconsequential stuff** Note which types of headings get numbered and/or highlighted.

Just skipping a line starts a new paragraph.
