# Questions which can be answered

## Questions which can be answered

- Would a more precise tape measure have helped?

## Questions which can be answered

- Would a more precise tape measure have helped?
- Would a more precise stopwatch have helped?

## Questions which can be answered

- Would a more precise tape measure have helped?
- Would a more precise stopwatch have helped?
- Should we have performed more trials?

# Questions which can be answered

- Would a more precise tape measure have helped?
- Would a more precise stopwatch have helped?
- Should we have performed more trials?  
If so, how many?

## Questions which can be answered

- Would a more precise tape measure have helped?
- Would a more precise stopwatch have helped?
- Should we have performed more trials?  
If so, how many?

**All of these can be answered definitively.**

# What about previous questions?

# What about previous questions?

- Each week's in-lab questions give insight into the experiment.

# What about previous questions?

- Each week's in-lab questions give insight into the experiment.
- Each week's post-lab questions give insight into the experiment.

# What about previous questions?

- Each week's in-lab questions give insight into the experiment.
- Each week's post-lab questions give insight into the experiment.
- The final task each week suggests whether these insights belong in the Discussion or Conclusions.

# What about previous questions?

- Each week's in-lab questions give insight into the experiment.
- Each week's post-lab questions give insight into the experiment.
- The final task each week suggests whether these insights belong in the Discussion or Conclusions.

**These give lots of possibilities for explaining your results.**
