Safety Information

To avoid electric shock, personal injury, damage to the meter or the equipment under test, adhere to the following practices:

- The 33XR-A Digital Multimeter is UL, cUL, and EN61010-1 certified for Installation Category III – 600V and Category II – 1000V. It is recommended for use with local level power distribution, appliances, portable equipment, etc. where only smaller transient overvoltages may occur, and not for primary supply lines, overhead lines and cable systems.
- Do not exceed the maximum overload limits per function (see specifications) nor the limits marked on the instrument itself. Never apply more than 1000 V dc/750 V ac between the test lead and earth ground.
- Inspect DMM, test leads and accessories before every use. Do not use any damaged part.
- Never ground yourself when taking measurements. Do not touch exposed circuit elements or probe tips.
- Do not operate the instrument in an explosive atmosphere.
- Exercise extreme caution when measuring voltage >20 V // current >10 mA // AC power line with inductive loads // AC power line during electrical storms // current, when the fuse blows in a circuit with open circuit voltage >1000 V // servicing CRT equipment.
- Always measure current in series with the load – NEVER ACROSS a voltage source. Check fuse first. Never replace a fuse with one of a different rating.
- Do not change the position of the Function/Range Switch while the MIN MAX, HOLD, or REL feature is enabled. Erroneous readings will result.
- Remove test leads before opening battery or case to change battery or fuses.

Introduction

The 33XR-A is a manual ranging handheld digital multimeter for measuring or testing the following:

- DC and AC voltage
- Temperature
- DC and AC current
- Capacitance
- Resistance
- Diodes
- Frequency
- Continuity

Additional features include the following modes:
MIN MAX, HOLD, REL (relative), and Peak

Making Measurements

Verify Instrument Operation

Before attempting to make a measurement, verify that the instrument is operational and the battery is good. If the instrument is not operational, have it repaired before attempting to make a measurement.

Correcting an Overload (\(\text{OL}\)) Indication

An \(\text{OL}\) indication may appear on the display to indicate that an overload condition exists. For voltage and current measurements, an overload should be immediately corrected by selecting a higher range. If the highest range setting does not eliminate the overload, interrupt the measurement until the problem is identified and eliminated. The \(\text{OL}\) indication is normal for some functions; for example, resistance, continuity, and diode test.

Measuring DC Voltage

See Figure 1

1. Set the Range Switch to an appropriate \(V\) range.
2. Select the highest range and work down if the voltage level is unknown.
3. Connect the Test Leads: Red to \(E\), Black to \(\text{COM}\)
4. Connect the Test Probes to the circuit test points.
5. Read the display, and, if necessary, fix any overload (\(\text{OL}\)) conditions.

Measuring AC Voltage

See Figure 2

1. Set the Range Switch to an appropriate \(V\) range.
2. Select the highest range and work down if the voltage level is unknown.
3. Connect the Test Leads: Red to \(V\), Black to \(\text{COM}\)
4. Connect the Test Probes to the circuit test points.
5. Read the display, and, if necessary, fix any overload (\(\text{OL}\)) conditions.

Preparing for Current Measurements

- Turn off circuit power before connecting the test probes.
- Allow the meter to cool between measurements if current measurements approach or exceed 10 amp.
- A warning tone sounds if you connect a test lead to a current input before you select a current range.
- Open circuit voltage at the measurement point must not exceed 1000 V.
- Always measure current in series with the load. Never measure current across a voltage source.
Measuring DC Current  See Figure 3
1. Set the Range Switch to an appropriate \( \text{X} \) range.
   Select the highest range and work down if the current level is unknown.
2. Connect the Test Leads: Red to mA or 10 A, Black to COM
3. Turn off power to the circuit being measured.
4. Open the test circuit (\( \times \)) to establish measurements points.
5. Connect the Test Probes in series with the load.
6. Turn on power to the circuit being measured.
7. Read the display, and, if necessary, fix any overload (\( o \)) conditions.

Measuring AC Current  See Figure 4
1. Set the Range Switch to an appropriate \( \text{X} \) range.
   Select the highest range and work down if the current level is unknown.
2. Connect the Test Leads: Red to mA or 10 A, Black to COM
3. Turn off power to the circuit being measured.
4. Open the test circuit (\( \times \)) to establish measurements points.
5. Connect the Test Probes in series with the load.
6. Turn on power to the circuit being measured.
7. Read the display, and, if necessary, fix any overload (\( o \)) conditions.

Measuring Resistance  See Figure 5
1. Set the Range Switch to an appropriate \( \Omega \) range.
   Select the highest range and work down if the resistance level is unknown.
2. Connect the Test Leads: Red to \( V \Omega \leftrightarrow \), Black to COM
3. Turn off power to the circuit being measured.
4. Discharge any capacitors that may influence the reading.
5. Connect the Test Probes across the resistance.
6. Read the display. If \( o \) appears on the highest range, the resistance is too large to be measured.

Measuring Continuity  See Figure 6
1. Set the Range Switch to \( \Omega \).
2. Connect the Test Leads: Red to \( V \Omega \leftrightarrow \), Black to COM
3. Turn off power to the circuit being measured.
4. Discharge any capacitors that may influence the reading.
5. Connect the Test Probes across the resistance.
6. Listen for the tone that indicates continuity (< 35\( \Omega \)).

Checking Diodes  See Figure 7
1. Set the Range Switch to \( \Omega \).
2. Connect the Test Leads: Red to \( V \Omega \leftrightarrow \), Black to COM
3. Turn off power to the circuit being measured.
4. Free at least one end of the diode from the circuit.
5. Connect the Test Probes across the diode.
6. Read the display. A good diode has a forward voltage drop of about 0.6 V. An open or reverse biased diode will read \( o \).
Measuring Capacitance

1. Set the Range Switch to P.
2. Connect the Test Leads: Red to COM, Black to mA.
3. Turn off power to the circuit being measured.
4. Discharge the capacitor using a 100 kΩ resistor.
5. Free at least one end of the capacitor from the circuit.
6. Connect the Test Probes across the capacitor. When measuring an electrolytic capacitor match the test lead polarity to the polarity of the capacitor.
7. Read the display.

Measuring Temperature

1. Set the Range Switch to °C or °F.
2. Connect a TEMP adapter plug (XR-TA) to the V, lA and COM inputs.
3. Connect the K-type thermocouple to the TEMP adapter.
   Match the polarity of the adapter to the polarity of the thermocouple.
   Note: Thermocouple is not intended for contact with liquids or electrical circuits.
4. Expose the thermocouple probe to the temperature to be measured.
5. Read the display.

Measuring Frequency

1. Set the Range Switch to 1 MHz.
2. Connect the Test Leads: Red to Hz, Black to COM.
3. Connect the Test Probes to the signal source.
4. Read the display. The Meter will autorange for the best resolution.

Additional Features

Input Test Lead Warning
The meter emits a continuous tone when a test lead is placed in the mA or 10 A input jack and the selector switch is not set to a correct current range. (If the DMM is connected to a voltage source with its leads connected for current, very high current could result). All current ranges are protected by fast acting fuses.

MIN MAX Measurements

WARNING To avoid erroneous readings, do not change the position of the Function/Range Switch while the MIN MAX function is enabled.

The MIN MAX function reads and updates the display to show the maximum or minimum value measured after you press the MIN MAX button. Pressing the MIN MAX button for less than 1 second will put the meter into a mode of displaying the maximum, minimum, or actual readings. Each time the button is pressed, the meter will cycle to the next display mode as shown in the table below. Press the MIN MAX button for more than 2 seconds to disable this feature.

<table>
<thead>
<tr>
<th>Button</th>
<th>Display</th>
<th>Value Displayed</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt; 1 second</td>
<td>MAX</td>
<td>Maximum value after feature activated</td>
</tr>
<tr>
<td>&lt; 1 second</td>
<td>MIN</td>
<td>Minimum value after feature activated</td>

<tr>
<td>&lt; 1 second</td>
<td>MIN MAX (blinks)</td>
<td>Actual input after feature activated</td>
</tr>
<tr>
<td>&gt; 2 seconds</td>
<td>Exit function</td>
<td></td>
</tr>
</tbody>
</table>
Peak Hold Measurements

Note: The PEAK function must be calibrated to meet the specifications.
Peak Hold records and stores the positive and negative peak values that occur while measuring an ac signal. To calibrate the Peak Hold function press the PEAK button for more than 2 seconds. The display will show CAL when the calibration cycle is done. Press the PEAK button again for the maximum (P+) and minimum (P-) peak values for the ac signal being measured. The display will toggle between the P+ and P- readings each time the PEAK button is pressed. Press the PEAK button for more than 1 second to exit the PEAK function.

Auto Power Off

Auto Power Off is a battery saving feature that puts the meter into a sleep mode if the Function/Range Switch has not changed position in the last 30 minutes. To wake the meter turn it off and then on. The Auto Power Off feature can be disabled to keep the meter from going to sleep. This feature is useful when using the MIN MAX mode for extended periods. To disable the Auto Power Off feature use the following procedure:
1. Set the Function Switch to OFF.
2. Press and hold the MIN MAX button while turning the Function Switch to the desired function.
3. Continue to press the MIN MAX button until the display finishes this initialization period and the reading settles.
4. Release the MIN MAX button. The Auto Power Off feature will remain disabled until the meter is turned off and then on.

Relative Measurements

**WARNING**

To avoid erroneous readings, do not change the position of the Function/Range Switch while the REL function is enabled.

The Relative mode displays the difference between the actual reading and a reference value. It may be used with any function or range. To make a relative measurement establish a reference value by measuring a value and then pressing the REL button after the reading has stabilized. This stores the measured value as the reference and sets the display to zero. The meter subtracts the reference value from subsequent measurements and displays this difference as the relative value. Measurement values greater than the reference value will be positive and values less than the reference value will be negative.

To exit the Relative Mode, Press and hold the REL button for 2 seconds.

HOLD Measurements

**WARNING**

To avoid erroneous readings, do not change the position of the Function/Range Switch while the HOLD function is enabled.

The HOLD button causes the meter to capture and continuously display a measurement reading. To use the HOLD feature make a measurement, and then, after the reading has stabilized, momentarily press the HOLD button. You can remove the test leads and the reading will remain on the display. Pressing the HOLD button again releases the display.
Product Maintenance

Cleaning
To clean the meter, use a soft cloth moistened with water. To avoid damage to the plastic components do not use benzene, alcohol, acetone, ether, paint thinner, lacquer thinner, ketone or other solvents to clean the meter.

Troubleshooting
If the meter appears to operate improperly, check the following items first.
1. Review the operating instructions to ensure the meter is being used properly.
2. Inspect and test the continuity of the test leads.
3. Make sure the battery is in good condition. The low battery symbol \( \text{B} \) appears when the battery falls below the level where accuracy is guaranteed. Replace a low battery immediately.
4. Check the condition of the fuses if the current ranges operate incorrectly.

\textbf{WARNING}
To avoid electrical shock remove the test leads from both the meter and the test circuit before accessing the battery or fuses.

Battery and Fuse Replacement
See Figure 11:
To access the battery and the mA fuse remove the two screws holding the Battery/Fuse Cover in place, and lift the cover from the meter.
To replace the mA fuse, pry it from its clips using a small screwdriver. A spare mA fuse is located between the battery and the mA fuse.
\textbf{mA Fuse:} Fast Blow .315 A/1000 V minimum interrupt rating 30 kA (6.3 x 32 mm) (Amprobe® FP300)
To replace the 10 A fuse: 1) Remove the battery. 2) Remove the four rear-case screws. 3) Separate the case. 4) Remove the 10 A fuse cover. 5) Remove and replace the 10 A fuse. 6) Re-install the fuse cover. 7) Reassemble the meter.
\textbf{10A Fuse:} Fast Blow 10 A/1000 V, minimum interrupt rating 30 kA (10 x 38 mm) (Amprobe® FP100).
Specifications

General Specifications
Display: 3 ¾ digit liquid crystal display (LCD)(3999 count) with a 41-segment analog bar-graph.
Polarity: Automatic, positive implied, negative polarity indication.
Overrange: (B) or (A) is displayed.
Zero: Automatic.
Low battery indication: The is displayed when the battery voltage drops below the operating level.
Auto power off: Approximately 30 minutes.
Measurement rate: 2 times per second, nominal.
Operating environment: 0 °C to 50 °C at <70 % R.H.
Storage temperature: -20 °C to 60 °C, 0 to 80 % R.H. with battery removed from meter.
Temperature Coefficient: 0.1 × (specified accuracy) per °C. (0 °C to 18 °C, 28 °C to 50 °C).
Environment:
Indoor use, altitude up to 2000 m.
Battery life: 150 hours typical with carbon-zinc, 300 hours typical with alkaline.
Dimensions: 196 mm (H) ×92 mm (W) × 60 mm (D).
Weight: Approximately 400 g including battery.
Box Contents:
The 33XR-A includes the following items:
Test leads w/ alligator clips 1 set
Holster 1
Magnet Strap 1
Temperature Adapter 1
K-type thermocouple 1
Users Manual 1
9 V battery (installed) 1
mA fuse, 0.315 A/ 1000 V 1 spare

Approvals:
LISTED

Safety: Conforms to UL1244; EN61010-1: Cat II – 1000V / Cat III - 600V; Class 2, Pollution degree II.
EMC: Conforms to EN61326-1.

This product complies with requirements of the following European Community Directives: 89/336 EEC (Electromagnetic Compatibility) and 73/23 EEC (Low Voltage) as amended by 93/68 EEC (CE Marking). However, electrical noise or internal electromagnetic fields in the vicinity of the equipment may disturb the measurement circuit. Measuring instruments will also respond to unwanted signals that may be present within the measurement circuit. Users should exercise care and take appropriate precautions to avoid misleading results when making measurements in the presence of electronic interference.

Electrical Specifications
(Accuracy at 23 °C ±5 °C, <75 % R.H.)
DC VOLTS
Ranges: 400 mV, 4 V, 40 V, 400 V, 1000 V
Resolution: 100 µV
Input impedance: 10 M
Overload protection: 400 mV Range: 1000 V dc / 750 V ac rms (15 seconds) Other Ranges: 1000 V ac / 750 V ac rms
AC VOLTS (45 Hz – 500 Hz)
Ranges: 400 mV, 4 V, 40 V, 400 V, 750 V ac
Resolution: 100 µV
Accuracy:
x(1.5 % of reading + 4 digits)
x(2.0 % of reading + 4 digits) 200 Hz to 500 Hz on 4 V range
Peak hold accuracy:
x(3.0 % + 60 digits) on 40 V to 750 V ranges, 400 mV, 4 V ranges unspecified
Input impedance: 10 MΩ
Overload protection: 400 mV Range: 1000 V dc / 750 V ac rms (15 seconds)
Other Ranges: 1000 V dc / 750 V ac rms

DC CURRENT
Ranges: 400 µA, 4 mA, 40 mA, 300 mA, 10 A
Resolution: 0.1 µA
Accuracy:
x(0.0 % of reading + 1 digit) on 400 µA to 300 mA ranges
x(2.0 % of reading + 3 digits) on 10 A range
Burden-voltage:
400 µA Range: 1 mV/1 µA
4 mA Range: 100 mV/1 mA
40 mA Range: 1.2 mV/1 mA
300 mA: 4 mV/1 mA
10 A: 100 mV/1 A
Input protection: 0.315 A/1000 V fast blow ceramic fuse 6.3×32 mm on µA/mA input
10 A/1000 V fast blow ceramic fuse 10×38 mm on 10 A input
10 A Input: 10 A for 4 minutes maximum followed by a 12 minute cooling period

AC CURRENT (45 Hz – 500 Hz)
Ranges: 400 µA, 4 mA, 40 mA, 300 mA, 10 A
Resolution: 0.1 µA
Accuracy:
x(1.5 % of reading + 4 digits) on 400 µA to 300 mA ranges
x(2.5 % of reading + 4 digits) on 10 A range
Peak hold accuracy: x(0.0 % + 60 digits)
Burden-voltage: See DC Current
Input protection: 0.315 A/1000 V fast blow ceramic fuse 6.3×32 mm on µA/mA input
10 A/1000 V fast blow ceramic fuse 10×38 mm on 10 A input
10 A Input: 10 A for 4 minutes maximum followed by a 12 minute cooling period

RESISTANCE
Ranges: 400 Ω, 40 kΩ, 4 MΩ
Resolution: 100 mΩ
Accuracy:
x(1.0 % of reading + 4 digits) on 400 Ω range,
x(1.2 % of reading + 4 digits) on 40 kΩ range,
x(1.2 % of reading + 4 digits) on 4 MΩ range
Open-circuit volts: 0.5 V dc typical, (3.0 V dc on 400 Ω range)
Overload protection: 1000 V dc or 750 V ac rms

CAPACITANCE
Ranges: 4 µF, 40 µF, 400 µF, 4000 µF
Resolution: 0.1 µF
Accuracy:
x(5.0 % of rdg + 10 digits) on 4 µF range
x(5.0 % of rdg + 5 digits) on 40 µF to 4000 µF ranges
x(5.0 % of rdg + 15 digits) on 4000 µF range
Test voltage: < 3.0 V
Test Frequency: 10 Hz
Input protection: 0.315 A/1000 V fast blow ceramic fuse 6.3×32 mm on µA/mA input

TEMPERATURE
Ranges:-20 °C to 1000 °C, -4 °F to 1832 °F
Resolution: 1 °C, 1 °F
Accuracy:
x(0.0 % of rdg +4 °C) -20 °C to 10 °C
x(1.0 % of rdg +3 °C) 10 °C to 200 °C
x(3.0 % of rdg + 2 °C) 200 °C to 1000 °C
x(2.0 % of rdg +8 °F) -4 °F to 50 °F
x(1.0 % of rdg + 6 °F) 50 °F to 400 °F
x(3.0 % of rdg +4 °F) 400 °F to 1832 °F
Overload protection: 1000 V dc or 750 V ac rms

FREQUENCY (Autoranging)
Range: 4 k, 40 k, 400 k, 4 M, 1 MHz
Resolution: 1 Hz
Accuracy:
x(0.1 % of reading + 3 digits)
Sensitivity: 10 Hz to 40 kHz: >1.5 V rms;
4 MHz to 40 MHz: >2 V rms, >5 V rms
Min pulse width: >25 ns
Duty cycle limits: >30 % and <70 %
Overload protection: 1000 V dc or 750 V ac rms
CONTINUITY
Audible indication: Less than 35 Ω
Response time: 100 ms
Overload protection: 1000 V dc or 750 V ac rms

DIODE TEST
Test current: Approximately 1.0 mA
Accuracy: ±(1.5 % of reading + 3 digits)
Resolution: 1 mV
Audible indication: <0.35 V
Open circuit volts: 3.0 V dc typical
Overload protection: 1000 V dc or 750 V ac rms

ADDITIONAL FEATURES
mA, 10 A Lead connection: Beeps to warn test leads are connected to measure current while Function/Range Switch is not set to a measure current.
MIN MAX: Displays the minimum or maximum value detected while making a measurement.

PEAK: Displays the peak+ or peak- value in an AC voltage or AC current measurement.
Response time: more than 1 ms
HOLD: Holds the latest reading on the display.
REL: Execute relative mode.
Auto Power off: 30 minutes, typical

REPLACEMENT PARTS
TL36  Test Lead Set with Alligator clips
FP300  mA fuse - Fuse Pack .315 A/1000 V (4 each)
FP100  10 A fuse - Fuse Pack 10 A/1000 V (2 each)
XR-TA  Input Adapter for K-type thermocouple
TP255  K-type thermocouple
