Similar options exist for other platforms, like Arduino.

- Breadboards with individual wires or the cobbler are one option.

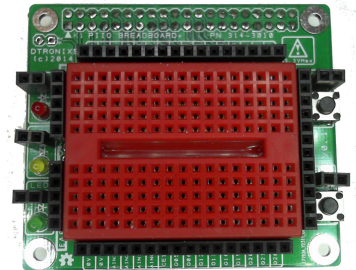

Prototyping Options

- There are several options for prototyping with the Raspberry Pi.

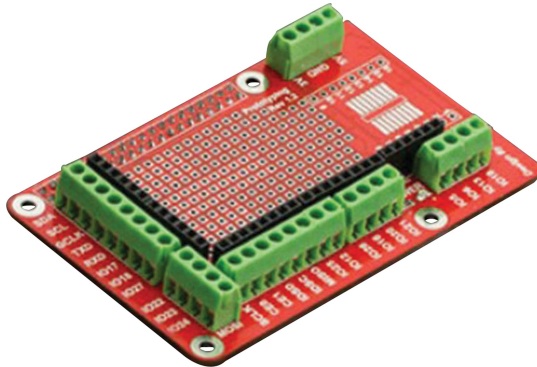

Similar options exist for other platforms, like Arduino.

- Breadboards with individual wires or the cobbler are one option.

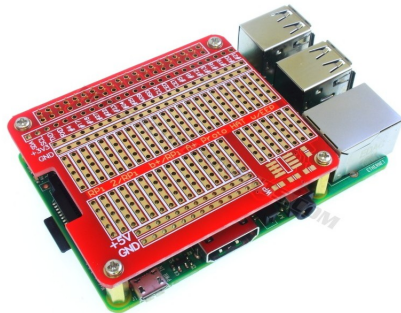

Following are some others.

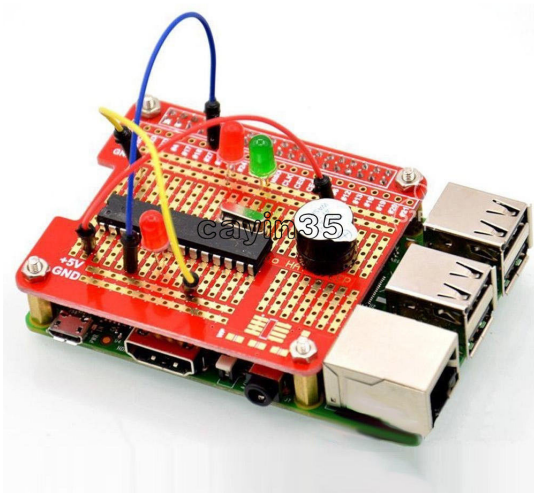

Hat with breadboard built-in.

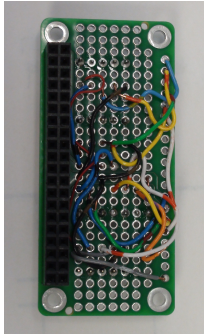

Hat with binding posts.

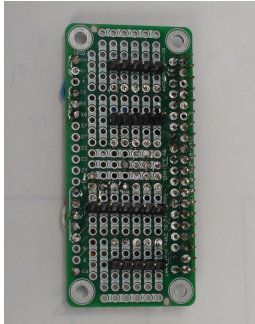

This one allows you to solder connections.

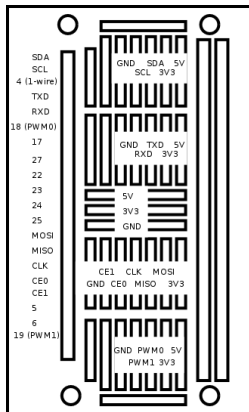

Here it is with components attached.

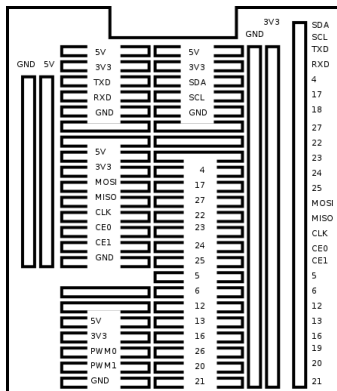

Here's one I have for my Pi Zero. (This is the bottom.)

Here's one I have for my Pi Zero. (This is the top.)

I laid it out so that interfaces are together and consistent.

I have done the same with the earlier hat for my Pi 2B.
