Question: How do you display a signal that changes very quickly, (say 1000 times per second?)

イロト イヨト イヨト イヨト

Question: How do you display a signal that changes very quickly, (say 1000 times per second?)

Islow it down, and don't try to keep up

イロト イボト イヨト イヨト

Question: How do you display a signal that changes very quickly, (say 1000 times per second?)

- Islow it down, and don't try to keep up
- if it's periodic, i.e. it repeats at certain intervals, keep "replaying" successive intervals so it looks static (like a stagecoach wheel in a movie, or many stroboscope effects)

Question: How do you display a signal that changes very quickly, (say 1000 times per second?)

- Islow it down, and don't try to keep up
- if it's periodic, i.e. it repeats at certain intervals, keep "replaying" successive intervals so it looks static (like a stagecoach wheel in a movie, or many stroboscope effects)

An oscilloscope uses the second approach.

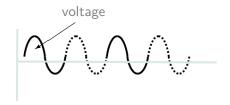

Question: How do you display a signal that changes very quickly, (say 1000 times per second?)

- Islow it down, and don't try to keep up
- *if it's periodic*, i.e. it repeats at certain intervals, keep "replaying" successive intervals so it looks static (like a stagecoach wheel in a movie, or many stroboscope effects)

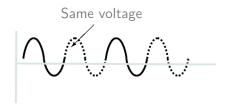

An oscilloscope uses the second approach.

Actually a digital storage scope can use the first one as well.

÷ 1.... Same voltage opposite direction

・ロト ・御 ト ・ ヨト ・ ヨト

• In a periodic signal, every time it repeats, every point in the signal will be repeated.

• In a periodic signal, every time it repeats, every point in the signal will be repeated.

- In a periodic signal, every time it repeats, every point in the signal will be repeated.
- Consider a sine wave:

イロト イヨト イヨト イヨト

- In a periodic signal, every time it repeats, every point in the signal will be repeated.
- Consider a sine wave:

Except for the peak and the trough, every value within the waveform will be repeated twice in one cycle;

< ロ > < 同 > < 三 > < 三 > 、

- In a periodic signal, every time it repeats, every point in the signal will be repeated.
- Consider a sine wave:

Except for the peak and the trough, every value within the waveform will be repeated twice in one cycle; once on the way up,

< ロ > < 同 > < 三 > < 三 > 、

- In a periodic signal, every time it repeats, every point in the signal will be repeated.
- Consider a sine wave:

Except for the peak and the trough, every value within the waveform will be repeated twice in one cycle;

once on the way up,

and once on the way down.

- In a periodic signal, every time it repeats, every point in the signal will be repeated.
- Consider a sine wave:

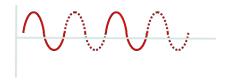

Except for the peak and the trough, every value within the waveform will be repeated twice in one cycle;

once on the way up,

and once on the way down.

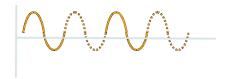

• If we pick a value and a direction, (going up or down), we can specify any point in the cycle uniquely.

• If we now start drawing the signal on a screen at that point, we will show some of the wave.

イロト イヨト イヨト

- If we now start drawing the signal on a screen at that point, we will show some of the wave.
- If we then look for the same point on the *next* cycle, and redraw it over the original, it should look exactly the same. This is how a scope works.

< ロ > < 同 > < 回 > < 回 > < 回 > <

- If we now start drawing the signal on a screen at that point, we will show some of the wave.
- If we then look for the same point on the *next* cycle, and redraw it over the original, it should look exactly the same. This is how a scope works.
- Most scopes have at least two input channels, so that two signals can be compared.
